

Element

Quick Look

Element is a secure, privacy-first messaging platform built on the Matrix protocol, designed for individuals, teams, and organizations seeking reliable, end-to-end encrypted communication without surveillance. It provides encrypted one-on-one and group messaging, voice and video calls, and seamless file sharing.

Being open-source and decentralized, Element avoids vendor lock-in and ensures full transparency. It supports federated communication, meaning users can connect smoothly across different servers.

With robust privacy measures and strong encryption, Element is ideal for civil society groups, journalists, and human rights defenders operating in sensitive and high-risk contexts around the world.

Features

Element offers secure, open-source communication designed for both individuals and organizations:

- **End-to-end encryption ensures privacy for one-on-one chats, group discussions, voice and video calls, and secure file sharing across all devices.**
- **Collaboration tools allow users to create large rooms, coordinate projects, and connect with federated Matrix servers for a broader network.**
- **Integration bridges seamlessly link Element with platforms like Slack, WhatsApp, and Signal, providing flexibility while maintaining security and transparency through its open-source foundation.**
